

**A PROCESS FOR PREPARING COATINGS ON
POROUS AND/OR ABSORBENT MATERIALS**

ABSTRACT OF THE DISCLOSURE

The present invention relates to a process for preparing a coating by

- a) applying to a porous and/or absorbent substrate a liquid coating composition containing at least one component having (meth)acryloyl groups and a dynamic viscosity of less than 2000 mPa.s and 0.1 to 10 wt.%, based on the non-volatile content of the coating composition, of an additive selected from polyamides, oligomeric fatty acid amides and polymeric fatty acid amides and
- b) polymerizing the composition with radiation.

The present invention also relates to the resulting coated substrates and to the coating compositions used in the process.
